

LACTAID® NEXT GENERATION STABILISED YEAST

LIVE WEIGHT GAIN TRIAL CONDUCTED AT BALGLASS FARM, LENNOXTOWN

- IMPROVED DLWG
- 4:1 RETURN ON INVESTMENT
- EXTRA 16.5KG CARCASS WEIGHT
- BETTER FEED CONVERSION

TESTIMONIALS SHOW:

- INCREASED FEED UTILISATION
- INCREASED MILK YIELD
- INCREASED MILK QUALITY
- INCREASED DLWG

"I am delighted with the performance of the bulls on Lactaid. They went away nearly 3 weeks earlier than usual, which has made a significant saving on feed costs. The bulls were slightly heavier at slaughter and also graded well. We used to feed sodium bicarbonate to prevent acidosis. However, the yeast does this job, as well as improving feed conversion and live weight gain. We found less whole grains coming through in the dung and no problems with bloat."

Mr Peter Ross, (Farmer Manager),
Ballogie Estates, Aboyne, Aberdeenshire

"We were already using a live yeast product in our TMR but the most obvious difference since using Lactaid has been a further increase in yield of 1.5L per cow. The dung is drier which seems to have reduced feet problems. The older cows have responded the best which will help increase the longevity of the herd and reduce my replacement costs."

Mr Roberts, Hendy,
Pontllyfni, Caernarfon
